Beersheva, Israel 0532409905 daniellublinsky39@gmail.com github.com/danielLublinsky linkedin.com/in/daniel-lublinsky

Daniel Lublinsky

SOFTWARE ENGINEER

SKILLS

General

.NET Framework (VB / C#)
Microsoft SQL Server
Python, Node, React
Rust, C / C++

Cloud

Google Cloud — BQ, Vertex
Cloud Run, Docker
NGINX, IIS, Windows Servers

AI & Data

RAG, embeddings, decision trees
Multi-agent orchestration
Evaluations, fine tuning

OS & Low level

Arch Linux, Red Hat, OpenShift
x86 ASM, UNIX internals
File systems, BIOS & bootloaders

Development

Claude Code, Herdr, Muse
Agents, plugins & MCP tooling
Jupyter, Git

EDUCATION

The Open University of Israel
B.Sc. Electrical and Electronics Engineering
Jul 2026 · In progress

Magshimim
Pre-military cyber program
Oct 2021 - Aug 2023
Low-level programming, hardware systems and networking.

EXPERIENCE

Contiki I.T
Sep 2022 - present (4 yrs 2 mos)
Full-time • Remote

Lead AI Engineer
Aug 2025 - present · 1 yr 3 mos

- Developing B2B BI AI retrieval with RAG, CAG BigQuery and Graph Query.
- Multi-agent reasoning harness with orchestration, decision trees and context-grounded tools.
- Safety evaluations and model hallucinations, alignment and performance optimization.

.NET Engineer
Sep 2022 - present • South District, Israel

- Built SQL Server data ingestion pipelines using ODBC/OLE DB, for large-scale financial data.
- Architected multi-threaded .NET engines and used dump analysis to resolve deadlocks and memory leaks.
- Refactor and maintain legacy software, optimizing I/O performance, dependency injections and external API integrations.

IAF Flight Test Center
Dec 2023 - Nov 2026 (3 yrs)
Lead Software Engineer • Israeli Air Force • Mandatory military service

- Built .ASP & FastAPI backends to analyze and model avionics blocks.
- Developed ML change point detection systems using HMM and ruptures, and neural network regression.
- Architected data-heavy React frontends, integrating WASM and Jupyter environments, configuring NGINX and Git pipelines.

Freelance Full Stack
Jan 2021 - Aug 2022 (1 yr 7 mos)
Independent Developer

- Developed and maintained full-stack applications for multiple clients (blogs, websites & apps).
- Developed iOS applications in Swift, integrating native Android features and APIs.

PROJECTS & VOLUNTEERING

Unix-style 32-bit OS
A 32-bit operating system. The operating system features a FAT16 file system, a two-stage bootloader, a physical memory manager, and a command shell written in C and Assembly.

FPV Drone Lab
Quadcopters built from bare frames — ESC/motor soldering, wiring, flight-controller and VTX integration. Betaflight firmware contributions, EdgeTX Lua scripting, ExpressLRS link protocols, and PID and filter tuning.

Visiting Lecturer (Volunteering)
Magshimim
Education • 1 year
Lecturing students on cyber & networking concepts, helping them manage their time and giving supportive advice to push education.

BACKGROUND

Hello,

I am an American software engineer living in Beersheva, Israel. Born in Connecticut, USA. Fluent in Hebrew, English, and Russian. Programming since 2019, with a strong interest in hardware and AI. I run a small workshop where I build, solder and tune drones.
